EYE CORROSION/IRRITATION: No data
SKIN SENSITISATION: No data
REPEATED DOSE TOXICITY:
Epidemiologic studies of workers in the carbon black producing industry in the U.S. and in Western Europe show no significant adverse health effect due to occupational exposure to carbon black.
CARCINOGENICITY:
The carbon black contained in this product corresponds to IARC (2B).
This classification is given to chemicals for which there is inadequate human evidence, but sufficient animal evidence on which to base an opinion of carcinogenicity. The classification is based upon the development of lung tumors in rats receiving chronic inhalation exposures to free carbon black at levels that induce particle overload of the lung. Studies performed in animal models other than rats did not show any association between carbon black and lung tumors.
